hypothetical protein MJ0166 - Methanococcus jannaschii
C;Species: Methanococcus jannaschii
C;Accession: G64320
R;Bult, C.J.; White, O.; Olsen, G.J.; Zhou, L.; Fleischmann, R.D.; Sutton, G.G.; Blake, C; Reich, C.J.; White, O.; Olsen, B.F.; Weinstock, K.G.; Merrick, J.M.; Glodek, A.; Senice, J.S.; Sadow, P.W.; Hanna, M.C.; Cotton, M.D.; Roberts, K.M.; Hurst, M.A.
Science 273, 1058-1073, 1996
A;Authors: Kaine, B.P.; Borodovsky, M.; Klenk, H.P.; Fraser, C.M.; Smith, H.O.; Woese, C.
A;Tille: Complete genome sequence of the methanogenic archaeon, Methanococcus jannaschii.
A;Reference number: A643100; WUID:96337999; PMID:8688087
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Apported to a protein BMEI0144 [imported] - Brucella melitensis (strain 16M)
C;Species: Brucella melitensis
C;Species: Brucella melitensis
C;Species: Brucella melitensis
C;Accession: AC3270

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation

    sn-glycerol + phosphate.
    -!- ENZYME REGULATION: Inhibited by aphingosine, zinc ions and propanolol. Not inhibited by N-ethylmaleimide treatment.
    -!- SUBUNI: Homodimer. This complex seems not to be involved in substrate recognition, it may confer only structural or functional

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -1- INDUCTION: By epidermal growth factor (EGF), vascular endothelial growth factor (VEGF), basic fibroblast growth factor (bFGF) and phorbol myristate acetate (PMA).
-1- PTM: N-glycosylated. Contains high-mannose oligosaccharides.
-1- SIMILARITY: Belongs to the PA-phosphatase related phosphoesterase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PubMed=14725715; DOI=10.1186/1471-2091-5-2;

"Lipid phosphate phosphatases dimerise, but this interaction is not required for in vivo activity.";

BMC Blochem. 5:2-2(2004).

-I- FUNCTION: Catalyzes the conversion of phosphatidic acid (PA) to diacy1g1ycerol (DG). In addition it hydrolyzes lysophosphatidic acid (LPA), ceramide-1-phosphate (C-1-P) and sphingosine-1-phosphate (S-1-P). The relative catalytic efficiency is LPA = PA: C-1-P > S-1-P. May be involved in cell adhesion and in cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CATALYTIC ACTIVITY: A 3-sn-phosphatidate + H(2)0 = a 1,2-diacyl-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           plasma membrane localization.

"The Dri 42 gene, whose expression is upregulated during epithelial differentiation, encodes a novel ER resident transmembrane protein."; J. Biol. Chem. 271:29928-29936 (1996).
                                                                                                                                                                                                                                                                                                                                                                                                                                               -1- PTM: N-glycosylated.-1- SIMILARITY: Belongs to the PA-phosphatase related phosphoesterase
                                                                                                                                                                                                                                    Am. J. Physiol. 281:L1484-L1493 (2001).
-!- FUNCTION: Catalyzes the conversion of phosphatidic acid (PA) to diacylglycerol (DG). In addition it hydrolyzes lysophosphatidic acid (LPA), ceramide-1-phosphate (C-1-P) and sphingosine-1-phosphate (S-1-P) (By similarity). Involved in the regulation of epithelial differentiation.
-!- CATALYTIC ACTIVITY: A 3-sn-phosphatidate + H(2)O = a 1,2-diacyl-sn-glycerol + phosphate.
                                                                                                                                                                                                                                                                                                                                                                 reticulum associated.
-1- TISSUE SPECIFICITY: Detected in epithelial cells of intestinal mucosa, lung, liver and brain.
-1- DEVELOPMENTAL STAGE: Expression is increased during epithelial differentiation in intestinal mucosa as well as in kidney, liver
                                                                                             Barila D., Murgia C., Nobili F., Gaetani S., Perozzi G., "Subtractive hybridization cloning of novel genes differentially expressed during intestinal development."; Eur. J. Biochem. 223:701-709(1994).

Hypothetical protein MAL3P7.32.
Name-MAL3P7.32, Synonyms=PFC1010w;
Plasmodium falciparum (isolate 3D7).
Eukaryota, Alveolata, Apicomplexa, Haemosporida, Plasmodium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 41; DB 2; Length 1334;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Wubbolts M.G., Terpstra P., van Beilen J.B., Kingma J., Meesters H.A.R., Witholt B., "Variation of cofactor levels in Escherichia coli. Sequence analysis and expression of the pncB gene encoding nicotinic acid phosphoribosyltransferase."; J. Biol. Chem. 265:17655-17672(1990).
                                                           DNA RES. 8:11-22(2001).
-!- CATALYTIC ACTIVITY: Nicotinate D-ribonucleotide + diphosphate nicotinate + 5-phospho-alpha-D-ribose 1-diphosphate.
-!- PATHMAY: NAD biosynthesis; nicotinamide to NaMN; second step.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the NAPRTase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

A 718-kb DNA sequence of the Escherichia coli K-12 genome
T a 718-kb DNA sequence of the Escherichia coli K-12 genome
T corresponding to the 12 7-28.0 min region on the linkage map.";
DNA Res. 3:137-155[1956].
I corresponding to the 12 7-28.0 min region of the linkage coli C-1- CATALYIT ACTIVITY: Nicotinate D-ribose 1-diphosphate = nicotinate + 5-phospho-alpha-D-ribose 1-diphosphate coli C-1- CATALYIT ACTIVITY: Nicotinamide to Namyi second step.
I PATHWAY: NAD biosynthesis; nicotinamide to Namyi second step.
C -1- MISCELLUNAR LOCATION: Cycoplammic (By similarity).
C -1- MISCELLANDOUS: Requires ATP as well as phosphoribosyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nature 413:852-856 (2001).
-!- CATALYTIC ACTIVITY: Nicotinate D-ribonucleotide + diphosphate = nicotinate + 5-phospho-alpha-D-ribose 1-diphosphate.
nicotinate + 5-phospho-alpha-D-ribose 1-diphosphate.
-!- PATHWAY: NAD biosynthesis; nicotinamide to NaMN; second step.
-!- SUBCELBLIAL LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the NAPRTase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-OCT-2003 (TrEMBLrel. 25, Created)

Sequence 11789, Application US/09489039A
Patent No. 6610836
GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 56193, Application US/09270767

Sequence 56193, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REPERENCE: File Reference: 7326-094

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SOPTWARE: PatentIN Ver. 2.0
